

Your reps go off-script. Your contract doesn't.

ClauseCatcher listens to live sales calls, catches any line that contradicts the signed contract, and reads the exact clause aloud while the customer is still on the line.

AssemblyAI Streaming STT v3

AssemblyAI Voice Agent

LIVE CALL

Demo contract, 4 clauses

Rep

Seats are capped at fifty on this plan. ✓

Rep

We can also do a verbal discount for a big client.

Contradicts §3.1

Pricing & Seat Cap

"Flat \$48,000 up to 50 seats; extra seats need signed written amendment; no automatic or verbal discounting."

...

Reading the clause aloud...

A promise said out loud becomes the deal

REP SAID, ON THE CALL

“If you sign this week, we can do a verbal discount on the extra seats.”

SIGNED CONTRACT §3.1 SAYS

“Flat \$48,000 up to 50 seats; extra seats need signed written amendment; no automatic or verbal discounting.”

1

Nobody checks the call live

2

The gap surfaces after signing

3

Then it's a dispute, not a correction

Listen. Check. Speak the clause.

01

LISTEN

AssemblyAI Streaming STT v3

Always-on transcript of the rep, seeded with keyterms from the contract.

02

CHECK

Gemini claim-check

Each finished sentence is checked. The model returns a verdict and a clause ID, never text.

03

SPEAK

AssemblyAI Voice Agent

Reads the contract's literal clause aloud, and the cockpit shows the alert card.

Caught mid-call. Spoken back word for word.

- Rep offers a verbal discount
- §3.1 flagged in ~5 s
- Voice Agent reads §3.1 aloud
- Marked spoken verbatim

4 clauses · read verbatim

Replace

4 clauses extracted

quoted exactly as written

§3.1 Pricing & Seat Cap

Flat \$48,000 up to 50 seats; extra seats need signed written amendment; no automatic or verbal discounting.

§4.2 Renewal

Auto-renews 12 months unless written notice 60 days before term ends; no mid-term termination.

§5.3 Data Retention

30-day recoverable archive then permanent deletion.

§6.1 Support SLA

P1 within 4 business hours Mon-Fri 9-6 ET; 24/7 requires Premium Support Addendum.

Two AssemblyAI connections, one job each

Why split? One Voice Agent session doing both jobs was tested live and started replying over the rep, even with a silence prompt. Streaming STT has no reply behavior, so silence is structural, not prompted. (ADR-0001)

We tested the easy paths. Both failed.

TRIED AND DROPPED

One Voice Agent session for everything

Auto-started 4 replies despite a silence prompt

Alert injected as a fake user message

Agent ignored the injected content

SHIPPED

Streaming STT v3 listens all call

Pure transcription: nothing to talk over

Voice Agent reply.create: “say exactly”

Spoken alert matched the clause, similarity 1.0

Both products are load-bearing. Cut Streaming STT and there is no transcript to check. Cut the Voice Agent and the alert is a silent card instead of an interruption the rep hears.

It never puts words in a rep's mouth

Literal clause text only

The words are the contract's own. Gemini picks the clause ID; the Voice Agent is told to say it verbatim.

Errors ≠ accusations

A failed, timed-out or unparseable check resolves to “unclear”, never a contradiction.

Evidence, or no alert

Every alert cites a specific clause ID. Each clause fires at most once per 20 seconds.

A false accusation is worse than a missed one. The read-back is graded against the clause after it is spoken: drift is flagged, not blocked.

Live end-to-end runs, real connections

~5 s

sentence end to alert
(4–6.5 s, five alerts)

1.0

agent transcript vs.
clause text

~0.2 s

speak request to first
audio (78–890 ms)

~\$0.15

API usage, full call
(\$0.08–\$0.15)

- False claims on §3.1 and §6.1 both caught; consistent lines raised nothing
- A monitor's clause request for §4.2, picked from the rail, answered by voice
- 14/14 contradictions caught, 0 false alarms; 151 server tests passing

Runs of 2026-09-15 to 2026-09-17: real AssemblyAI Streaming STT, Voice Agent and Gemini connections, scripted rep lines fed through the pipeline.

The category, and the slice we can name

\$1.6B–\$32B

2026 conversation-
intelligence estimates

1.59M

US wholesale &
manufacturing reps
(BLS 2025)

\$0.6B–\$1.1B

those reps at a \$30–60
per-seat hypothesis

292k

technical & scientific
reps: the beachhead

- Each firm draws the category differently — the spread is the honest number, not the top of it
- Beachhead: the 292,000 technical and scientific reps, who sell the hardest contracts
- \$30–60 per seat per month is our hypothesis — no buyer has been asked to pay it yet

1.59M = 1.3M except-technical-and-scientific + 292k technical and scientific, BLS Occupational Outlook Handbook 2025 employment (bls.gov/ooh). \$0.6B–\$1.1B = $1.59\text{M} \times \$30\text{--}60 \times 12$.

BUILT FOR

- Sales-ops teams running live calls
- Compliance teams who own the contract
- \$0.08–\$0.15 API usage per call

NEXT

- Physical-mic hardware (browser path verified 17/17)
- CRM and meeting-platform audio
- Multiple contracts per call

The correction a rep hears is the contract itself, spoken while the call is still happening.
